Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and merastasis. metastasis

Disclosure; SEQ ID NO 38065; 3071pp + Sequence Listing; English.

ANK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
corteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
polynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-derived cells. AAK64703
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK5492 to AAK54950 and AAM62169 represent sequences used in the exemplification of the present invention

c (a) screening modulators of precursor stem cell differentiation into osteoblasts, or bone tissue deposition;

(b) diagnosing abnormal deposition of bone tissue, abnormal rate of osteoblast formation or osteoporosis; or continuate formation or osteoporosis; or conditions monitoring the progression of bone tissue deposition.

(c) treating or monitoring treatment of the conditions cited in (b), or conditions include postmenopeusal osteoporosis; glucocorticoid osteoporosis or male osteoporosis, osteoponia, osteodystrophy, osteoporosis or male osteoporosis, osteoponia, osteodystrophy, osteoporosis, skeletal disease linked to breast cancer, mastocytosis, that involve altered bone metabolism (e.g. didopathic juvenile osteoporosis), skeletal disease linked to breast cancer, mastocytosis, osteoporosis, skeletal disease linked to breast cancer, mastocytosis, osteopolast differentiation associated cDNA marker of the invention.

Costeoblast differentiation associated did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of genes and their expression profiles associated with osteoblast differentiation for screening modulators bone formation, for diagnosing or treating e.g. osteoporosis, or as markers for the differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    57872

```

the cell to express the used to prevent,

represent sequences used in the exemplification of the present invention.

Sequence 5491 BP; 1662 A; 1226 C; 1439 G; 1164 T; 0 other;

the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynuclectides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK64950 and AAM82169

```
Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SM

> AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased example, they may be used to treat disorders associated with decreased example, they may be used to treat disorders associated with decreased that affect the actifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting Disclosure; SEQ ID NO 23856; 3071pp + Sequence Listing; English

The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the cDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of caidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. athmitis), neurological disorders (e.g. AIDshemer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. athma), cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. themophilia), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polynuclectides of the invention can also be used in gene therapy.

AAS41685-AAS42192 represent DNA sequences encoding for the novel human or argume polypeptides of the invention can also be used in gene therapy.

ABS41685-AAS42192 represent DNA sequences encoding for the novel human or argume polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                 Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        370 IATTATTAGAGACAGGTTCTCACTC-TGTCACCCCAGGCTGGAGTGCAGTGGCAATCAT 428

```

The present genomic sequence is that of human pituitary adenylate cyclase activating polypeptide (PACAP). This gene is localised to the short arm of chromosome 18p11 and synthesised in the retinal ganglion cells. The genomic DNA is isolated from lymphocytes of individuals. The coding region of the gene has a dinucleotide repeat polymorphism marker known as WA440 and an STS marker, ADCYAP1 is located in the 3 'UTR. These markers are useful to map the gene physically and genetically to the chromosome 18 This sequence can be used to design probes for detecting the presence or absence of a mutation in the wild type PACAP gene. It is polar affective disorder(BP-1) and schizoaffective disorders like bipolar affective disorder(BP-1) and schizoaffective disorder manic type (SAD-M), which are more valid than current clinical dispensions and subjective reports. It is used for identifying compounds that modulate PACAP gene expression which are useful for treatment of PACAP disorders.

Sequence 84607 BP; 23055 A; 17765 C; 18980 G; 24744 T; 63 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an antisense compound 8 to 30 nucleobases in length targetted to a nucleic acid encoding glycogen syththase kinase 3 alpha. The antisense compound specifically hybridises with and inhibits the expression of glycogen synthase kinase 3 alpha. The antisense compound is useful for the treatment of a diseases associated with glycogen synthase kinase 3 alpha such as diabetes, a neurological disorder, a haematopoietic disorder, a hyperproliferative disorder or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a developmental disorder. The antisense compounds may also be used prophylactically to prevent or delay infection, inflammation or tumour formation. The present genomic DNA sequence encodes human glycogen synthase kinase 3 alpha protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GCTCACTGTAACCTCAAACTCCTGGGCTCAAGTGATCCTACTACTCAGCCTCCAGAGTA 489

No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAS derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1501 TGATCTCAGCTCACTGCAACTTTCGCCTCCGGGTTCAAGCAATTCTCCTGCTTCAGCCT 1560

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The
```

```
(a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (f) assessing the prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid molecule (I) compa nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (I) is also useful as a pharmacodyanamic or pharmacogenomic marker.
                                                                                                                                                                                                                                                                                               (MILL-) MILLENNIUM PREDICTIVE MEDICINE INC.

GENERAL INFORMATION:
APPLICANT: YAN, CHUMING et al.
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: THEREOF
FILE REFERENCE: CLOOI178
CURRENT APPLICATION NUMBER: US/09/813,817
CURRENT FILING DATE: 2001-03-22
                                                                                                                                                                                                                                                                                                                                                                                                                        50106

Sequence 3, Application US/09978197
Patent No. 6403353
GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: THEREOF
FILE REPERBNCE: CLO01178DIV
CURRENT APPLICATION NUMBER: US/09/978,197
CURRENT PILING DATE: 2001-10-17
PRIOR PRILING DATE: 2001-03-22
